SUMMARY

Motivated Computer Science student with hands-on experience developing, implementing, and optimising software applications using Python and modern web technologies. Skilled in designing, building, debugging, and integrating solutions involving databases, APIs, and user-focused interfaces. Experienced in analysing problems, developing scalable solutions, and managing projects from concept to implementation. Seeking a software development internship to apply technical skills, contribute to real-world projects, and continuously enhance programming and problem-solving abilities.

EDUCATION

Bachelor of Engineering in Computer Science and Technology

L.J. Institute of Engineering and Technology

Currently pursuing my degree with a focus on computer science, programming, software development, and related technologies. Relevant coursework includes data structures, databases, computer networks, operating systems, and software development.

09/2024 – 07/2028
Ahmedabad, Gujarat,
India

Higher Secondary Certificate (HSC) — Science

Nirman High School

Completed HSC in the Science stream with 75% marks.

2023 – 2024
Ahmedabad, Gujarat,
India

Secondary School Certificate (SSC)

Nirman High School

Completed Secondary School Certificate (SSC) with 80% marks.

2021 – 2022
Ahmedabad, Gujarat,
India

SKILLS

- | | | |
|-------------------------------|--------------------|---------------------------|
| • Python | • Machine Learning | • Artificial Intelligence |
| • JavaScript | • Java | • React.js |
| • Node.js | • Express.js | • HTML5 |
| • CSS3 | • REST APIs | • MongoDB |
| • DBMS | • JDBC | • Data Structures |
| • Object-Oriented Programming | • SDLC | • Pandas |
| • Data Analysis | • Streamlit | • Django |
| • DRF | • Git & GitHub | • Problem Solving |
| • Analytical Thinking | • Communication | • Teamwork |
| • Adaptability | • Time Management | |

CERTIFICATES

The Complete Python Bootcamp: From Zero to Hero in Python

Udemy | Issued Aug 2024

Data Analysis with Pandas and Python

Udemy | Issued Apr 2026

Git & GitHub – The Practical Guide

Udemy | Issued Mar 2026

Introduction to HTML, CSS, & JavaScript

IBM | Issued Dec 2025

Inheritance and Data Structures in Java

Penn Engineering | Issued Jul 2025

PROJECTS

WealthNest — AI-Powered Family Investment Portfolio Tracker

06/2026 – 07/2026

Full-Stack Web Application

- Developed an AI-powered family investment portfolio platform using React.js, Node.js/Express, Django REST, and MongoDB.
- Implemented role-based access control for family heads, members, and administrators, with investment and transaction management.
- Built machine learning models for risk classification and future-value prediction, comparing multiple algorithms and automatically selecting the best-performing model.
- Integrated Google Gemini API to provide portfolio-aware AI assistance, along with automated charts and PDF reports.

SpendWise — Expense Tracker System

01/2026 – 01/2026

Python & Web-Based Expense Management Application

- Developed an expense management system for tracking expenses, monthly budgets, and borrowing/lending transactions.
- Built a Python-based version using Streamlit, Pandas, and Matplotlib for data management, analysis, and visualization.
- Developed a web version using HTML, CSS, and Vanilla JavaScript, focusing on responsive UI and dynamic user interaction.
- Implemented expense categorisation, budget monitoring, repayment tracking, and spending analytics.

CareeRise — Job Portal System

08/2025 – 08/2025

Job Portal & Recruitment Management System

- Developed a console-based job portal using Core Java, JDBC, Data Structures, and MySQL.
- Implemented user authentication, resume-based job matching, job discovery, application tracking, and salary-based filtering.
- Built a custom queue using linked nodes to manage matched jobs, applying Data Structures concepts to the application.
- Used PreparedStatements, MySQL stored procedures, custom exceptions, and input validation for secure and reliable database operations.

SmartCart — Supermarket & Inventory Management System

02/2025 – 02/2025

Console-based application for managing products, inventory, shopping carts, and billing

- Developed a supermarket management system using Core Java, OOP, and multidimensional arrays as part of a group project.
- Implemented product categorisation, inventory tracking, cart management, stock validation, and automated billing.
- Developed billing functionality with discounts, conditional charges, and Cash, Card, and UPI payment modes.
- Collaborated with team members to integrate independently developed modules into a cohesive application.

Payroll Management System — Employee Payroll & Salary Management System

02/2025 – 02/2025

Console-based application for managing employee records and calculating payroll

- Independently developed a payroll management system using Core Java, OOP, inheritance, encapsulation, and arrays.
- Implemented employee record management, salary calculation, allowances, deductions, overtime, and bonus handling.
- Added functionality for searching, sorting, automatic employee ID generation, input validation, and average salary calculation.
- Applied Bubble Sort and structured class design to manage employee records and payroll operations
